## Overview of Watchlist Screening

Watchlist Verification involves screening individuals or entities against various watchlist sources or databases that contain information about individuals or entities of interest. These watchlists typically include individuals or organizations that are sanctioned, under investigation, or pose a potential risk due to their involvement in illegal activities, terrorism, money laundering, or other illicit behavior.

During the verification process, the provided identity information is compared against entries in the vendor's sources to identify any matches or potential red flags. If a match is found, further investigation or due diligence may be necessary to assess the level of risk and determine the appropriate course of action.

## Trulioo Watchlist Value Proposition

Trulioo is one of the most complete watchlist services on the market. Our Watchlist is the AML compliance solution of choice for the world's largest global marketplaces, financial institutions, and trading platforms. Fully integrated into Trulioo's platform, Watchlist connects to customers' KYC and KYB onboarding journeys via a single API to provide screening and monitoring of their users against 6,000+ global watchlists and 20,000+ Adverse Media lists – both at the point of onboarding and continuously thereafter. With such extensive coverage, our search algorithms ensure that they provide only the relevant information to our customers.

Moreover, the underlying sourcing of our vendor sanctions data does not rely on model-based data analysis or gathering. Instead, they utilize AI-powered searches to vet government sources that contain sanctioned subject and entity information. The data from these sources is collected and delivered without modification to our end users. Therefore, to provide the most compliant solution possible to our customers, we furnish all relevant data in real-time without model validation or risk modeling so that our customers do not risk missing any critical data points that could compromise their regulatory obligations and requirements.

Our position is to cast a wide net to ensure all potential matches are returned, and from there, our clients can utilize our relevancy score and customizable filters based on individual risk tolerance to minimize false positives. Our clients can then adopt their own validations and scoring models based on their customers' needs in confidence that we have provided the most thorough and accurate information to match against the subjects and entities of interest.

## Watchlist Technology

Trulioo watchlist datasource performs searches against thousands of "sub-sources" that are categorized into different **Watchlist Search** and **Adverse Media** Search groupings.
The categories to be searched can be configured at the back-end, and there are also options to run checks for **Politically Exposed Persons (PEP)** and choose the level of PEP data to return.

Trulioo

## Watch List Search

This is the possible category that the 6,300 different sanction and fitness lists are broken down into that Trulioo has access to.

- **Recommended Selections for Watchlist Search:**

If a client is being introduced or just starting with the Advanced Watchlist, it is suggested to review the available categories. Using the All WatchList Results category can be done for initial testing, but it will return watchlist hit data that is likely irrelevant to the individual or to the client's business (i.e., too much data). If wanting to start with a single category, Global Watchlist and Sanctions are recommended.

## Adverse Media

More than one option can be selected. Also, the adverse media are the possible categories that 10s of thousands of different news sources are broken down into that Trulioo has access to. More than one option can be selected.

- **Recommended Selection for Adverse Media**

If a client is being introduced or just starting with the Advanced Watchlist, it is suggested to review the available categories. Using the All AM Results category can be done for initial testing, but will return watchlist hit data that likely is irrelevant to the individual or to the client's business (i.e, too much data). If wanting to start with a single category, Business and Financial is recommended.

**Note:** For a listing of the datasources associated with the different watchlist categories, see the most recent Excel file under the Folder of Global Gateway Watchlist Available Sources Lists. This Sources list is **internal only** and should not be shared with any prospect.

## WL Search Category Descriptions

| Category | Description | Sample Source List |
|---|---|---|
| Global Watch Lists and Sanctions | Contains data from global agencies with known terrorists, money launderers, international narcotics traffickers, parties subject to economically sanctioned programs, etc. | • Office of Foreign Assets Control (OFAC) – Sanctions<br>• European Union – Sanctions<br>• Canada – Sanctions • United Kingdom – Sanctions<br>• Japan – End User List |
| Global Criminal | Contains criminal data | • International Criminal Police Organization |

Trulioo

| | | |
|---|---|---|
| | from federal and international law enforcement agencies. | (INTERPOL) – Red Notices<br>• European Network of Fugitive Active Search Teams (ENFAST) – Europe's Most Wanted<br>• Federal Bureau of Investigation (FBI) – Most Wanted • India – Central Bureau of Investigation (CBI) – Red Notices<br>• Ukraine – Ministry of Internal Affairs – Most Wanted Terrorists<br>• Court of Appeal in Belgrade – Court Decisions<br>• Judiciary of Hong Kong – Judgements |
| Sex Offenders | Contains data on individuals who have been criminally charged and convicted of a sex crime. | • Texas Department of Public Safety – Top 10 Most Wanted Sex Offenders in Texas<br>• California – Orange County District Attorney – Sex Purchasers<br>• American Samoa Sex Offender Registry<br>• New Jersey State Police – State Sex Offender Registry<br>• Georgia Bureau of Investigations – State Sex Offender Registry<br>• Arizona Department of Public Safety – State Sex Offender Registry<br>• Idaho State Police – Violent Sex Offenders |
| Category | Description | Sample Source List |
| OFAC | Contains data from OFAC Sanctions lists, which include individuals and entities who are not permitted to do business in the U.S., terrorists, international narcotics traffickers, those engaged in activities related to the proliferation of weapons of mass destruction, and other threats to the national security, foreign policy or economy of the United States. | • Foreign Terrorist Organizations Sanctions Regulations [FTO]<br>• Foreign Sanctions Evaders – Non-Proliferation [FSE-WMD]<br>• FEDERAL EXCLUSION – Specially Designated Nationals [SDN] List<br>• Non-SDN List<br>• Blocked Pending Investigation, Foreign Narcotics Kingpin Sanctions Regulations [BPI-SDNTK]<br>• Blocked Pending Investigation, Patriot Act [BPI-PA]<br>• Weapons of Mass Destruction Proliferators Sanctions Regulations [NPWMD]<br>• List of Foreign Financial Institutions Subject to Correspondent Account or Payable-Through Account Sanctions (the "CAPTA List") |

| | | |
|---|---|---|
| | provision of financing or financial assistance connected to designated persons and prohibited transactions, terrorist organizations and associated individuals, etc. | • EU – Ministry of the Economy, Industry and Employment – Directorate-General of Customs and Indirect Taxes – Trade Restrictions<br>• Department of State – Directorate of Defense Trade Controls – Major Export Enforcement Cases<br>• ITAR Debarred Lists<br>• Office of Foreign Assets Control (OFAC) – List of Foreign Financial Institutions Subject to Correspondent Account or Payable-Through Account Sanctions (the "CAPTA List")<br>• International Trade Administration – Consolidated Screening List (CSL) |
| National Healthcare | Contains Medicaid/Medicare exclusions and adverse information on individuals and entities in the healthcare field. | • Office of Inspector General (OIG) – List of Excluded Individuals and Entities (LEIE)<br>• System of Award Management (SAM) – exclusions list • All available state-level medical exclusions lists<br>• State-level vendor exclusions lists<br>• Disciplinary/Board actions<br>• Imposter lists • Adverse licenses (expired, inactive, suspended, denied, on probation, etc.) |
| Category | Description | Sample Source List |
| Corruption | Contains data from global sources relevant to Corruption. | • World Bank – Stolen Asset Recovery Initiative (STAR) – Grand Corruption Cases Database<br>• World Bank – Ineligible Firms and Individuals<br>• International Revenue Service – Public Corruption Investigations<br>• Argentina - Anticorruption Office – Anti-Corruption Investigations<br>• Corruption Cases<br>• Ineligible Lists<br>• Bribery of government employees and officials<br>• Relevant Press Releases<br>• Asset Freezes<br>• Asset Recoveries • Relevant sources pertaining to Fraud |
| AML/KYC Compliance | | • Office of Foreign Assets Control (OFAC) – Sanctions<br>• The Financial Action Task Force (FATF)<br>• Financial Crimes Enforcement Network (FinCEN) – Primary Money Laundering Concern List<br>• Financial Industry Regulatory Authority (FINRA) – Barred Individuals<br>• United Nations Office on Drugs and Crime – |

Trulioo

| | | |
|---|---|---|
| | | International Money Laundering Information Network – IMOLIN Case Law Database<br>• Philippines – Anti-Money Laundering Council – Designated Individuals and Entities<br>• International Sanctions and designated lists<br>• Fraud Arrests, Cases, Convictions and Most Wanted Lists<br>• Unauthorized Firms<br>• Disqualified Directors<br>• White-Collar Crime data<br>• Suspensions/Debarments<br>• Blacklists<br>• Investor/Consumer Warnings/Notices<br>• Human Trafficking data<br>• Disciplinary Decisions from Financial Regulators<br>• Ineligible Firms and Individuals |
| Category | Description | Sample Source List |
| SAM.gov | Contains data from Entity Management Data Package. The Entity Management Package contains the entity registration data publicly available under the Freedom of Information Act (FOIA) for those registered in SAM to do business with the Federal government. | |
| Financial | Contains adverse data from global financial regulatory authorities, relevant law enforcement sources, Financial Sanctions, and sources containing information on fraudulent activity. | |
| National Criminal File | Contains National Most Wanted Lists, Inmate Rosters, Criminal Press Releases, Arrest Records, Warrant Lists, Court Orders, Sex Offender Registries, etc. from Federal, State, and County Sources. | |
| Exclusion/Debarment | Contains individuals and entities that have been excluded, debarred, disqualified, found unfit, etc. | |
| Terrorism | Contains data from global Terrorist lists, sanctions, Terrorist and Terrorist Organization Profiles, etc. | |
| Global Healthcare | This category is not currently in use. Once completed, it will contain adverse healthcare information, similar to the National Healthcare category. | |
| Real Estate | This category is not currently in use. Once completed, it will contain adverse information for Real Estate compliance. (i.e. Real Estate disciplinary actions, excluded individuals, and suspended/debarred individuals and entities.) | |
| Activist | Consist of war crimes, genocide, crimes against humanity, torture and enforced disappearance, international crimes and crimes of the most serious kind against humans and animals. | |

**Adverse Media Category Descriptions**

Trulioo

| Category | Description | Examples | |
|---|---|---|---|
| General News | Contains all adverse news types (with the exception of Sports, Celebrity News, Gossip, and Weather). | • Regional News<br>• Top Stories | • Featured News<br>• World News |
| Business and Financial | Contains adverse news from business and financial articles. | • Business<br>• Financial<br>• Consumer<br>• Economy | • Companies<br>• Technology<br>• Markets<br>• Corporate Sector |
| Crime and Courts | Contains adverse news involving Crime and Courts. | • Investigations<br>• News on trials<br>• News on Arrests | • Police Logs<br>• News on Sentencings • News on Legal Cases |
| Politics and Government | Contains adverse news involving Politics or Government. | • Brexit News<br>• Parliament News<br>• Political News<br>• Embassies News | • Election News<br>• Federal/State/City Politics<br>• Government News |
| Animal Rights | This category contains adverse news geared toward animal rights, which includes news of animal cruelty, arrests, lawsuits, etc. | | |
| Military and Security | Contains adverse news involving Military and national security. | • War and Conflict<br>• Defense News<br>• News on Terrorism/Terrorist<br>• International Criminal Court News | • Country Relations<br>• Government Briefs<br>• Sanctions<br>• News from Intelligence Agencies |
| Corruption | | •News of bribery<br>• News of embezzlement<br>• Political corruption<br>• News from Anti-Corruption agencies | • Whistle-Blower News<br>• News of investigations/arrests/cases/trials for corruption<br>• Misconduct News |

Trulioo

## PEP Search

PEP Determines if Politically Exposed Persons (PEP) results are returned.
Trulioo's Global Gateway Watchlist is set apart by the proprietary use of relationship extraction and machine learning, coupled with continuous capture of PEP data from over 20,000 qualified global Politically Exposed Persons source lists. These PEP source lists are available publicly from government and official sources all over the globe.

Additionally, Trulioo uses proprietary algorithms that scan media around the globe daily to identify specific information on existing and newly elected officials, their colleagues, relatives, and personal and business relationships. The use of relationship extraction and machine learning eliminates the need for human intervention, which is prone to time-consuming analysis, the omission of critical information in error, and improper documentation of data of interest identified. Global Gateway Watchlist is positioned to provide users with the most timely and accurate global PEP solution to ensure a superior screening and compliance solution.

Sample of primary Politically Exposed Person source lists, where Trulioo continuously captures relevant data:

### How Trulioo's GlobalGateway PEP Search Stands Apart from Competitors

**Unrivaled accuracy through total automation:** Other providers use human researchers to make important updates to PEP Profiles, this ensures the information is only as accurate as the person performing the task; this means data will be missed and therefore will not be reported.

**Compliance assurance via continuous global updates:** Existing industry leaders in this space rely on human research to create and update their PEP Profiles. This delays critical updates for days, weeks, months, and even years at a time, leaving their clients with non-compliant results.

**Undiscovered PEP profiles:** Trulioo uses proprietary algorithms coupled with Artificial Intelligence with Machine Learning and Relationship Extraction to identify newly transitioned PEPs and their associations, not yet published in common PEP lists readily available. This ensures our users have the latest and most accurate information while avoiding delays that require manual updates to our competitor's databases

### PEP Continuous Monitoring

Trulioo's GlobalGateway Watchlist can be enhanced with continuous monitoring for changes. Trulioo's monitoring system will alert our customers if any changes are reported on the subjects or entities that they wish to monitor. Trulioo's monitoring prevents duplicate/repeated records from being returned from search to search to reduce manual review

### Expiration of PEP Qualifications

To prevent our customers from receiving irrelevant PEP alerts from individuals who were PEPs in the past, Trulioo removes PEP information from our database if the following conditions are met:
A PEP (an individual who has actually held office in their lifetime) must be one hundred years old or less to be recorded
A PEP (an individual who has actually held office in their lifetime) must have been deceased for less than ten years to be recorded

### Watchlist Credentialing

Now that we learn about 3 important Watchlist searches, let's look at what Trulioo can control via credentialing:

The watchlist hit info that is returned in our responses corresponds to records that exceed certain

relevancy score thresholds that can be customized for the different searches. There are relevancy score thresholds for the Watchlist Search, the Adverse Media Search, and the PEP search.

The datasource requires a minimum of Last Name to perform its searches when the Date of Birth Filter is disabled. Otherwise, if the Date of Birth Filter is enabled, it would want to be given both Last Name and Date of Birth.

Trulioo empowers clients with seamless control over watchlist settings from the backend. The customizable settings include:

**Note:** What you can see in the table below is our default configuration.

| Default Settings | |
|---|---|
| **WatchList Category Relevancy Score: 86%** | |
| **Watch List Search Options (PM, BV, OGM)**<br>☐ All Watchlist<br>☐ ActivistAML/KYC Compliance<br>☐ Exclusion/Debarment<br>☐ Financial<br>☐ Global Criminal<br>☐ Global Healthcare<br>☑ Global Watchlist and Sanctions | ☐ Import/Export<br>☐ National Criminal File<br>☐ National Healthcare<br>☐ Real Estate<br>☐ SAM.gov<br>☐ Sex Offenders<br>☐ Corruption<br>☑ OFACTerrorism |
| **Adverse Media Category and Relevancy Score: 99%** | |
| **Adverse Media Search Options (PM, BV, OGM)**<br>☐ All AM Results<br>☑ No AM Results<br>☐ Animal Rights<br>☐ Business and Financial<br>☐ Crime and Courts | ☐ General News<br>☐ Military and Security<br>☐ Corruption<br>☐ Politics and Government |
| **PEP Relevancy Score: 95%** | |
| **PEP Search (PM, OGM):** False | **PEP Level:** |

Trulioo

| | |
|---|---|
| **PEP Country Filter (PM):** False | ☑ **1: Level 1:** Name-based |
| **Recommended Selections:**<br>If a client is being introduced or just starting with the Advanaced Watchlist, it can be suggested to select all three levels so that the client can see the wider range of watchlist hit data available before deciding to narrow down their settings. | ☐ **2: Level 2:** Aliases<br>☐ **3: Level 3:** Associates including Family Members, Social/Business Relations, Business Partnerships, Contributions, and Professional History |
| **Other Settings** | |
| **Send Country in Request (PM, BV):** True | Determines if the country used when submitting the request to Trulioo is included in the search request on the datasource. If set to True, then the country will be sent and the relevancy scores will be higher for any Potential Hits that are for the same country. If set to False, then the country not be sent and the relevancy scores will not be influenced by the country used for submitting the request to Trulioo. |
| **DOB Filter (PM, OGM):** True<br>If you want to know more about the DOB filter function, Please review this document. | Determines if records having a non-matching birthdate will be returned. Media search hits that do not mention a birthdate will always be returned, the filter only removes records that don't match. |
| **Required Translation (PM, BV):** False | Determines whether to invoke vendor's translated name/subject search for using Latin characters for a non-Latin character name/subject. |

**Note:** While we provide a default category, it's important to note that we do not offer consultation on the specific categories and subcategories that should be configured. These should be defined by the client during the implementation phase.

## Relevancy Score

A relevancy score in a watchlist is a numerical value or rating that indicates how closely a particular entity (such as an individual or organization) matches the criteria or characteristics defined in the watchlist. This score helps users **quickly** assess the potential risk or importance of a match. We also have control over defining the relevance score.

Setting a high relevancy score threshold in a watchlist has several implications:

- **Reduced False Positives:** A higher threshold means only the most relevant matches will be flagged, reducing the number of false positives. This helps focus attention on entities that are more likely to be genuine risks.

- **Increased False Negatives:** Conversely, a high relevancy score threshold might miss some relevant matches, increasing the risk of false negatives. Some potentially risky entities may not be flagged for review.

- **Efficiency:** With fewer alerts to review, the efficiency of the review process improves. This can be particularly beneficial for organizations with limited resources dedicated to compliance and risk management.

- **Risk Management:** Organizations must balance the trade-off between missing potential risks (false negatives) and spending too much time on non-relevant alerts (false positives). Setting a high threshold should be part of a broader risk management strategy.

- **Customizability:** The appropriate relevancy score threshold can vary based on the specific context and industry. Financial institutions may require a different threshold compared to healthcare providers or government agencies.

- **Compliance:** It's crucial to ensure that the threshold setting aligns with regulatory requirements. Some industries have specific compliance standards that must be met, which could influence the appropriate relevancy score threshold.

- **Periodic Review:** Regularly reviewing and adjusting the relevancy score threshold is important. As new data and patterns emerge, recalibrating the threshold ensures continued effectiveness and relevance of the watchlist.

Our Search Algorithms bring together a variety of matches, which are then ranked and parsed by Trulioo's Relevancy Score. The score assigns a match percentage between the name searched and the name found in the record. This percentage score is based on how different the name in the record is versus the information that was searched. This score helps to reduce the chance of manual review by summarizing information from name matching algorithms, DoB matching, and address filters.
Different customers have different risk thresholds around how many false positives they are able

and willing to tolerate. For this reason, our Watchlist service provides customers with a tailored Relevancy Score cutoff as to whether an alert is appropriate for their use. This fine-tuned accuracy ensures that any flagged users are truly worth the customers attention.
We recommend our clients determine their cutoff by testing our watchlist service with a low score such as 85%. After analyzing the results, clients can choose to set a Relevancy Score cutoff that dictates all results scored below the chosen floor will not be returned in the results. This lets clients determine what works best for them with regards to false-positive tolerance.

Search Algorithms and Relevancy Score Examples

### Watchlist Custom Categories

Clients wishing to have the watchlist checks run against only a specific set of lists can have a custom category created by our vendor.

Custom Categories can be requested by the AE or CSM of the account. The request should go to the implementation Specialist (During the onboarding phase) or support team (When the project is handed over to support).

## Watchlist Supported Language Translation Logic

**Note:** The logic we cover below is applied to all watchlist categories.

To address the main question about Trulioo's watchlist service—specifically, the languages it supports and the logic behind its configuration—let's break it down into two parts:

### Supported Languages in Trulioo's Watchlist (Vendor Sources)

If you need to know the sources and corresponding languages available on our vendor side, please refer to the latest version of our Master Watchlist Datasource Google Sheet. This document provides comprehensive details on the data sources and supported languages, ensuring that our watchlist service remains accurate and up-to-date.

**Note:** The Google Sheet is for internal use only. Please do not share this document.

### Supported Language and Character as an Input

The following languages are supported by the vendor as an input:

- English
- Arabic
- Chinese
- Greek

- Hindi
- Japanese
- Korean
- Russian
- Vietnamese

### Vendor Translation Mechanism

It's important to note that our watchlist includes a backend configuration called "**Required Translation**," which accepts a Boolean value (True or False). This config determines whether to invoke the vendor's translated name/subject search for using Latin characters for a non-Latin character name/subject.

If set to True, search results will contain both the search for the non-Latin character name/subject as well as the translated Latin character name/subject. Thus with Required Translation being True, one specific search hit may typically appear twice in the results (once due to the non-Latin name/subject and once due to the Latin equivalent).

However, it is important to know that, the Translation endpoint **doesn't translate the input data** but instead performs **transliteration**.

Transliteration conveys how a name is pronounced in another language rather than providing its meaning. This service is widely used by many watchlist vendors in the industry and is the most effective approach.

Our vendor offers name translation for searches. Here is how this feature works:

- **Searches with English name input into the search:**

  The vendor searches for the name in English, however, they do look for other language variations at the time of extraction, so they end up searching an index that has both English and Foreign characters for the name.

- **Searches with non-English name input into the search:**

  **With “Translate” checked:** The vendor translates the name to English, and they search for the name in English, however, they search an index that has both English and Foreign characters for the name, therefore non-English options found may also be provided in the results.

  **Without “Translate” checked:** The vendor DOES NOT translate the name, and they search for the non-English name, however, they search an index that has both English and Foreign characters for the name, therefore English options found may also be provided in the results.

Trulioo

## Frequently asked questions:

- **Does our vendor search provide article translation for Adverse Media?**

  **Answer:** The vendor does not translate the article or source text for Adverse Media results. The language of the site content is dependent upon the language offerings of the source site.

  They do translate subject names for searching in multiple languages (if the translate option is selected).

- **How does our vendor name search work?**

  **Answer:** The vendor search will take the name exactly as entered into the search, search on that exact name, and then will utilize our name matching technology and return results based on the name entered and any names found based on our algorithm, which accounts for:

  - Proximity Precision
  - Nickname Matching
  - Phonetics Analysis
  - Relevancy Score

  Due to our vendor's advanced algorithm, complexities such as names in reverse order, names with initials, and names found in unstructured data, are commonly accounted for in our results.

- **How often are the source records for vendor WLS (Watch Lists & Sanctions)data sources updated?**

  **Answer:** It depends on the source, however, the vendor updates data from each source based on their schedule. If they are unable to determine the frequency from the source, they update at least once a month, but in many cases weekly or even daily.

- **What data is stored and how long is it retained in our vendor Search?**

  **Answer:**

  **API Searches:** The vendor does not retain PII (other than name searched) or results on the search in our database. All PII and results are kept in the client's system of record. The API call comes through the vendor system and the information feeds any results found back to the client's system of record.

**API Search Monitors:** For Monitors, since the vendor has to store the search information to determine if changes occur, they do store PII (search request and responses). The default retention time for API Monitors is 4 months post the time of the monitor being suspended by the end-user or the vendor. If a monitor is deleted (by the end-user or requested from the vendor by the client), all data is immediately deleted.

- **How does our vendor Search handle business name suffixes?**

**Answer:** Our vendor Search product contains an extensive catalog of global business name suffixes commonly used when searching company names. This catalog encompasses terms like, but not confined to the list below, in which our name search function will bypass them, ensuring results are based solely on the core name of the company:

LLC, Limited Liability Company
L.L.C, Limited Liability Company
Ltd, Limited
Corp, Corporation
Inc, Incorporated
GmbH, Gesellschaft mit beschränkter Haftung (Germany)
SARL, Société à Responsabilité Limitée (France)

- **How does our vendor help reduce false positives?**

**Answer:** Our vendor has a proprietary 13-point proprietary name matching algorithm that ensures the subject input is the subject of the search results. A relevancy score percentage is also provided with the results delivered to the end user. Flexibility in score cut-off can be manipulated to limit or expand results (this applies to Watchlist, Sanction, and Adverse Media output).

Also, our vendor's newest offering is their proprietary sentiment analysis for Adverse Media which is used to filter out irrelevant media results and rank adverse media results by confidence level of negative sentiment (making the most serious/adverse results obvious).

AI-driven technology is used across Watchlist and Sanctions, PEP, and Adverse Media to ensure the accuracy, timeliness, and relevancy of the data. Our vendor system also accounts for the following languages: Arabic, Chinese, English, French, German, Greek, Hungarian, Italian, Japanese, Korean, Portuguese, Russian, and Spanish - including Latin and non-Latin alphabets.
